RECYCLED REELS

Carris Reels is dedicated to answering the call for sustainability. In addition to assisting in your organization's green initiatives, we strive to save you the time, labor, and disposal costs that can be associated with empty lumber reels.

Did you know?

A recycling program can assist with product lead times and keep acquisition costs as low as possible for all parties while keeping your facility clear of empty reels. With fluctuating material markets and overall demand changes, having a stock of quality reels available to your supplier can help ensure your product reaches you as quickly as possible.

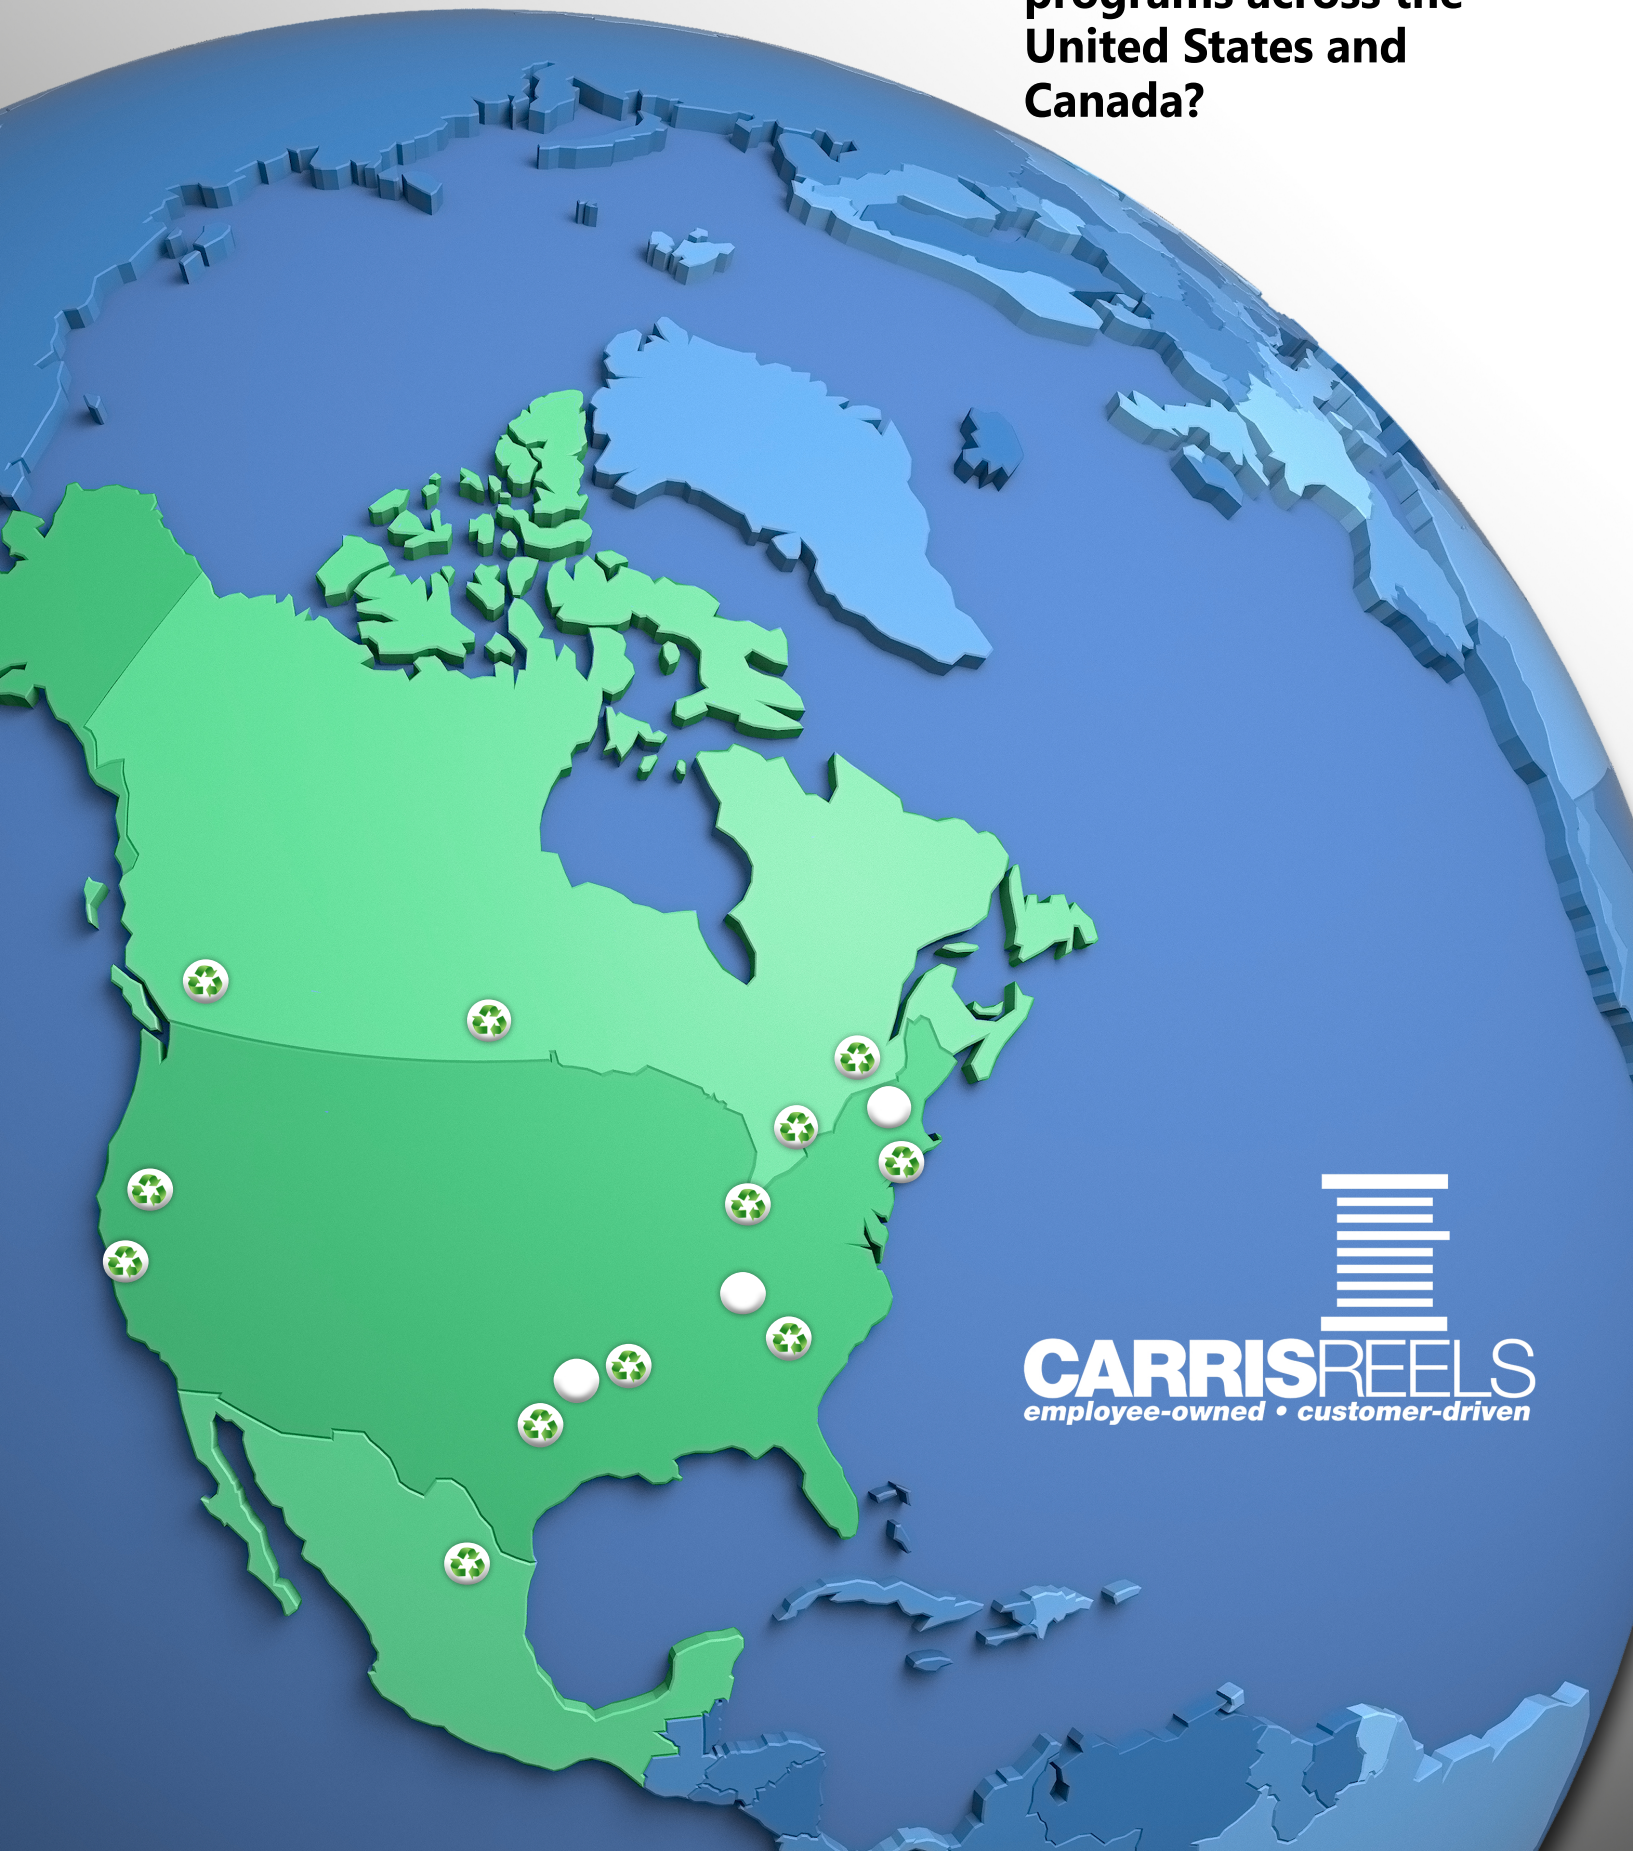

Once at our site, all empty reels will undergo a thorough refurbishing process and quality assurance check before being offered back into the marketplace for use with your wire and cable.

Our Carris Reels account managers are dedicated to assisting you with a program to meet your individual needs and match your site to our closest recycling facility. Contact us today to get started!
